Hi Guys,

Since few months part of the team has been working in a direction of merging telephony and **ZigBee** technology.

Having those both will open some pretty interesting possibility in the area of **Home Automation**

Have you ever wanted to control your front door lock or your air conditioner using your IP0x PBX?

Or probably you want to control remotely any other appliance you have at home?

The new ZigBee extension to the IP0x family of PBXs is just for that.

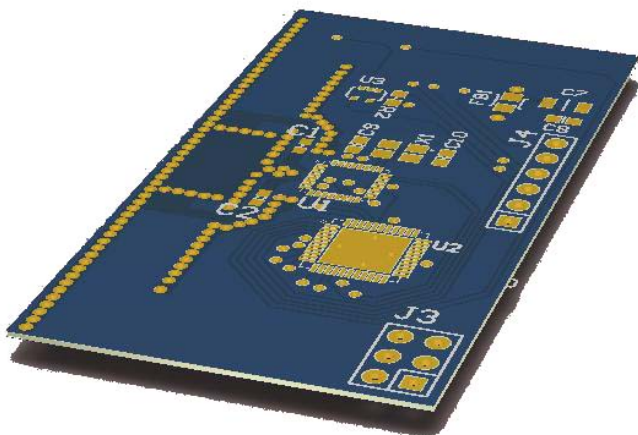

For the control you may use simple call, IVR or SMS.

Initial version of the software has been investigated.

The early prototypes has been developed and are now manufacturing.

An early system will target general purpose control using relay outputs and digital inputs.

Expect to be ready by mid January 2011.
