Hi Guys,

Due to the hard work of our main WEB developer Jason Kenah we have fully working multilingual support in the Switchfin GUI now.
Apart of the default English language now we can select also French. The selection is done in the System Setup -> Options -> Language Settings.
In the same menu you can also download the corresponding sounds prompts if you would like to.
Adding new languages now means just translation of the string array in a single place and should be pretty easy job.
If there is a volunteer to do this please don't hesitate to contact us ;-)

All comments/suggestions/remarks are invited!
Cheers
